

Quality Policy

Maicon Engineering provides fabrication, installation, construction and maintenance to the resource and energy sectors through its fabrication facilities and site services in Western Australia and Northern Territory. These services are provided using a management system that helps improve efficiency and productivity, and ensures that all services provided meet with the requirements of our customers both internal and external.

The Business Management System adopted by Maicon Engineering assures our clients that it complies with the requirements of ISO 9001:2015 and all other industry statutory and regulatory requirements.

Our business objectives

- Our organisation is 100% committed to maintaining a certified Business Management System
- Our organisation, through innovation and evaluation strives to develop cost-effective services adding value to our clients
- Our organisation strives to provide an environment that attracts & retains high quality people
- Our organisation will maintain a robust & positive safety culture

Maicon Engineering is committed to delivering this by:

- Establishing, implementing, maintaining and continually improving our management systems
- Seek to identify, monitor and act on our clients' specific needs and expectations to ensure ongoing business with our clients
- Ensure all staff have the right skills to guarantee our product and services meet the needs of our clients
- Continuous evaluation on the performance of processes and services provided

The Managing Director of Maicon Engineering is accountable for ensuring that this policy is implemented throughout the company, understood by all staff and reviewed every year.
